

The **imi** Family of Companies
Ground-Level Solutions for Wind EnergySM

IRVING MATERIALS • E&B PAVING • SPECIALTIES COMPANY

Look to our Level

They're certainly hard to miss. Towering hundreds of feet into the air, the massive turbines at any wind farm are bound to draw your eye as they harness the wind's energy to support the growing demand for renewable power resources.

But as you lower your gaze and reach ground level, you'll see a vast foundation of building materials and construction applications that anchor every turbine base and support each farm's underlying infrastructure.

That's our level. And it's where you'll find wind energy solutions from the IMI family of companies.

The Power of 3

The IMI family of companies offers you a simple, yet powerful premise: Why settle for the inherent limitations of a single company when you can capitalize on the depth and resources of three?

We multiply our collective capabilities to the power of three by operating as a vertically integrated team. Backed by the experience, expertise and proven performance of three companies and 2,250 employees, we offer a uniquely exponential proposition to wind farm owners, developers, general contractors, engineering firms and local community governments.

1 Irving Materials, Inc. (IMI)

One of the largest and most comprehensively equipped concrete and aggregate suppliers in the Midwest and South, IMI provides concrete and aggregate materials that anchor hundreds of wind farm turbines throughout the Midwest.

2 E&B Paving, Inc.

With ten Indiana offices, 13 permanent asphalt plants, two portable asphalt and four portable concrete plants, E&B Paving delivers world-class asphalt and concrete paving solutions required by wind farms and local government agencies.

3 Specialties Company, LLC

Specialties offers road and site preparation expertise for wind farm owners, developers and contractors that includes lime and cement stabilization, milling services, as well as fencing and guardrail supply and installation. Our Canadian operation, Specialties Construction Company Canada Inc., focuses exclusively on the needs of customers in the Canadian wind energy marketplace.

Exponential Scope, Benefits and Results

As wind farms multiply in size and geographic scope, the IMI family of companies is strategically structured and located to serve customer needs. And very importantly, underlying all of our work is an unwavering adherence to safety standards which not only result in safer worksites, but also more cost-efficient projects.

∴ CONCRETE

IMI is an industry leader in producing ready mix concrete which we use in building wind farm turbine base foundations. We produce and supply our customized imix™ concrete mixes to your specific construction and engineering applications.

IMI owns and operates concrete plants throughout Indiana, Illinois, Kentucky, Ohio and Tennessee. With our Indiana region blanketing the geographic areas directly in the path of Midwestern wind energy projects, we offer you a competitive construction advantage by mobilizing our plant assets and trucks for extraordinarily efficient concrete production and supply. Furthermore, we can erect portable concrete batch plants near wind farm developments to offer tens of thousands of cubic yards of product through just-in-time delivery methods.

∴ AGGREGATE

The IMI Aggregates Division mines and delivers the limestone, gravel and sand required on wind farm projects. With aggregate locations positioned throughout the heart of the Midwest's wind energy territory, IMI can meet your needs quickly and cost effectively.

∴ E&B PAVING

E&B Paving can support the access and county road paving requirements of any wind farm development, as well as other related transportation construction projects associated with your project. Whether you need full-depth asphalt, concrete, chip & seal, roller-compacted concrete, warm-mix asphalt, thin overlay, road maintenance consulting expertise or other paving solutions, E&B's teams understand local market conditions and offer you on-site accountability and project management.

∴ SPECIALTIES COMPANY

Specialties Company delivers specialized construction services throughout North America. Wind farm owners and contractors particularly utilize Specialties' expertise in lime and cement stabilization for turbine foundations and access roads, our asphalt road milling services, as well as our ability to supply and install the fencing and guardrails required at project sites.

Sharing a Common Vision

It takes special foresight to look across hundreds of acres of farmland and envision a wind energy development. That's what you do best.

The IMI family of companies shares your big picture perspective. We believe the most effective ground-level wind energy solutions result not only from our internal team's collaboration, but also from partnering with customers. With a common strategic vision, we can plan how to support your wind project needs safely, on budget and on time.

E&B PAVING, Inc
World-Class Solutions at a Local Level™
